

Solution Brief

# Ransomware Prevention and Recovery

Supporting your business from risk mitigation to incident response

Your data is valuable — and cyberattackers know it. The threat of ransomware has increased exponentially in recent years, and no business is safe. Security and IT teams need to have strategies, tools, and plans in place to ensure the utmost readiness.

**How do you know you're prepared? Ask the following questions of your business:**

- Have you implemented specific solutions or tactics to address the threat of ransomware?
- Are you maximizing the security capabilities of existing infrastructure and systems?
- Are your backups on a modern data protection platform and on systems protected from ransomware?
- Are you able to recover your whole environment — not just files or systems — in hours?
- Do you have a written plan for responding to an attack if it were to occur? How often do you test this plan?

As a business leader, it can be difficult to ascertain organizational readiness with an objective point of view. Even more challenging is staying up to date on ever-evolving security best practices and understanding which solutions are worth your investment.

Insight delivers complete ransomware response using a multilayered approach to help you minimize the risk of an attack and recover quickly after an event.

## Our services encompass:

Network enhancements and segmentation

Endpoint protection and end-user awareness

URL filtering and other access controls

Data protection for data across the IT environment

Backup capabilities aligned with business continuity requirements

## Across your IT environment

Identity

Endpoints and devices

Network

Infrastructure

Why Insight

**25+ years**

of data center experience

**16 years**

of incident and threat management experience

**14 years**

of penetration testing, vulnerability assessment, and security management

**100+**

data protection projects a year

**300+**

network projects a year

**40+**

microsegmentation projects a year

## Where to start

Our team is here for you, whether you need to build a security program from scratch, modernize your backup infrastructure, or manage a recent cybersecurity event.

### Data Protection Assessment

IT environments today are typically complex and multiplatform, making data protection a less-than-straightforward exercise. During our Data Protection Assessment, we evaluate your existing systems and capabilities, identify bottlenecks and architectural issues, and provide a roadmap for change inclusive of cost analysis so that you understand exactly what's needed to improve your stance.

### Incident Response services

Our Incident Response services are a combination of consulting and professional security services that enable effective proactive and reactive response. We can help you develop a fail-proof plan for responding to cybersecurity attacks that minimizes damage and accelerates recovery. And in the unfortunate event that your organization has suffered a successful cybersecurity attack, our team can be your first call.

### Security services

We've helped organizations secure their data and networks for more than 30 years. Our services span governance, risk, and compliance; cloud security, testing and assessment, and security controls, and align with industry standard framework NIST. We take a holistic approach that brings together the best practices, technologies, and strategies for mitigating risk and protecting your organization.

Getting started is easy.

## Driving innovation with digital transformation

At Insight, we help clients enable innovation with an approach that spans people, processes, and technologies. We believe the best path to digital transformation is integrative, responsive, and proactively aligned to industry demands. Our client-focused approach delivers best-fit solutions across a scope of services, including the modern workplace, modern applications, modern infrastructures, the intelligent edge, cybersecurity, and data and AI.
