

Solution Brief

Insight DevOps Workshop

Is your business executing digital transformation with the speed and consistency you need? Insight's new DevOps Workshop empowers teams to take full advantage of the strategies and tools that power today's development operations.

Background

Business systems and technology is an important competitive differentiator, and it's one that is constantly evolving. As businesses move towards digital transformation, demand grows for new applications to improve productivity and efficiency and take advantage of emerging technology. Today's development teams are under more pressure than ever to deliver effective, secure solutions for use across the business.

The work that DevOps teams perform spans the entire software and application development lifecycle, from initial analysis through to testing, eventual deployment and continuous development.

As a result, DevOps teams work with many stakeholders, with touchpoints at different times in the development cycle. They need to operate in a collaborative culture with a set of processes that support development, operations, testing and meet the needs of business stakeholders.

It isn't easy to step back and look at the full DevOps picture and ask if it is delivering the value you need at the pace you need it to. That is why Insight's DevOps Workshop is ideal to gain a detailed overview of the culture and benefits of DevOps available to you.

Benefits

- Gain a clear understanding of Insight's DevOps solution and the range of options for your DevOps journey.
- Discover how a strategic approach helps link DevOps solutions to business goals.
- Gain clarity on new ways of working and how to optimise development and build a DevOps culture.
- Identify common risks associated with DevOps and learn ways to manage them.

Business Challenge

Operational technology is an integral part of any business operating today. Software and applications keep business information flowing and are often a key competitive differentiator. But they take work. Development Operations brings together the people, processes and technology that transforms and propels technical solutions. To be effective and deliver against demanding objectives, DevOps needs the right structures, process handling and collaborative approach in place.

Without business, software development and IT teams working together, many organisations would struggle to achieve the technology shift needed to execute the organisational changes brought about by the pandemic.

Businesses that don't see application or software development as a continual process risk incurring massive technical debt. Gartner predicts that 90% of current applications will still be in use in 2025, but few will receive sufficient investment in their modernisation¹. This technical debt could consume over 40% of IT budgets.

It is little wonder that businesses are looking to DevOps to maximise the return on technology by keeping it relevant, modern and leverage cloud technology for greater efficiency.

Our solution

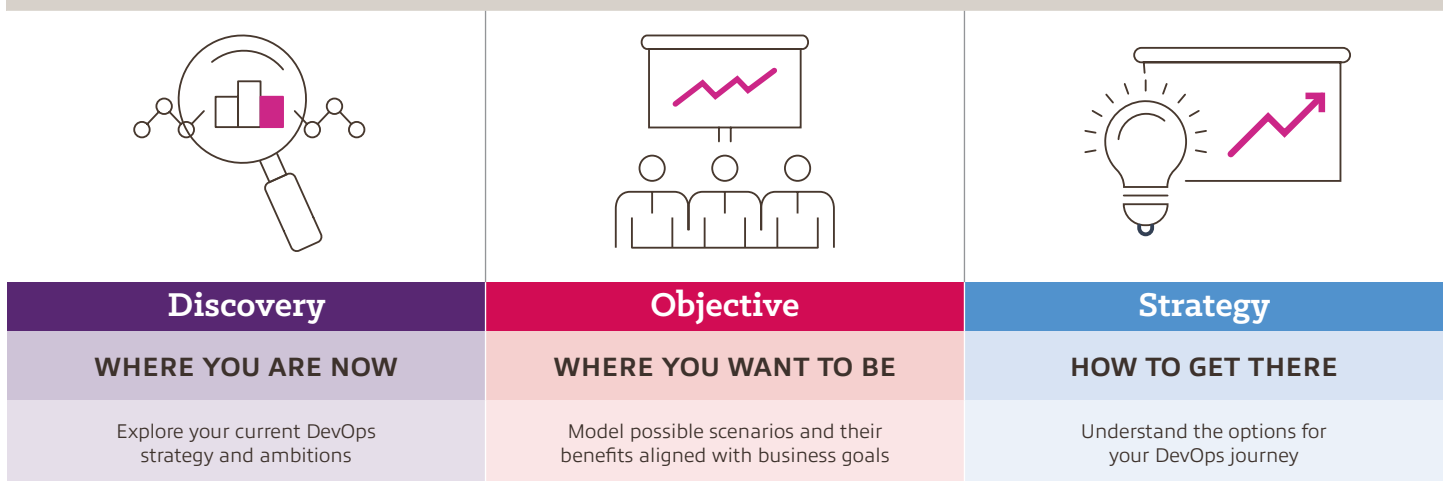

Insight's DevOps Workshop will help you shape and drive your DevOps journey. We start by building awareness of where you are now and where you want to get to. Together, we explore the solutions available to get you there. We create a roadmap for implementing the strategy, build a DevOps Landing Zone and manage the entire Application Lifecycle in a centralised way, combining the right tools with best practice.

Insight's DevOps Workshop provides you with:

- A detailed overview of the culture and benefits of DevOps
- Options to optimise DevOps leveraging Azure DevOps technology or GitHub
- Strategy-based approaches to align development operations with business goals
- Use cases and scenarios behind a trusted process handling approach
- Greater insight where there is an existing development infrastructure as well as where the DevOps journey has just begun
- Insight's best practice guidance for DevOps
- Future next steps and support available from Insight.

Setting out the right DevOps structures and process handling approach is essential to establish the best DevOps strategies and tools for your teams to transform your business and build successful, differentiating software.

Our DevOps Workshop comprises core deliverables
