Jamf help organisations succeed with Apple

Jamf is committed to enabling IT to empower end users and bring the legendary Apple experience to businesses, education, and government organisations via its Jamf Pro and Jamf Now solutions, and the 50,000+ member Jamf Nation community. Today, more than 12,000 global customers rely on Jamf to manage over eight million Apple devices.

DEPLOYMENT - Powerful deployment workflows for every scenario

Zero-touch

By far the easiest and most efficient way to deploy your devices is with Jamf Pro and Apple's Device Enrolment Program (DEP). Automatically enroll and configure new devices without requiring hands-on support from IT. Go from new-in-box to ready-to-use without time-consuming imaging or manual configuration.

Mac Imaging

For the traditionalists out there, Mac imaging lets you take part in a more hands-on approach to deploying computers. Utilise Jamf Pro to build modular or monolithic images and deploy them fast. Or, completely wipe the computer's drive and start with a fresh image.

User-Initiated

If you're implementing a bring your own device (BYOD) program or managing devices already in use, user-initiated enrolment is the way to go. Through a webpage, allow users to self-enrol their devices into Jamf Pro. This is all done on demand and at the user's discretion, easing the burden on you.

DEVICE MANAGEMENT - Automate tasks and take a proactive approach

Configuration Profiles

Define settings with iOS and macOS configuration profiles and distribute them to devices utilising Jamf Pro. Easily apply Wi-Fi, VPN, email settings and more so users can seamlessly connect to the resources they need.

Policies

Unique to macOS management with Jamf Pro, policies go beyond the basic device management capabilities of configuration profiles and help you install software and printers, manage local user accounts and conduct advanced management workflows.

Scripts

Run scripts on macOS utilising the Apple device management capabilities of Jamf Pro. Scripts provide more flexibility than standard configuration profiles and open the door to infinite device management capabilities.

Smart Targeting

Jamf Pro collects inventory details – including custom inventory attributes you define – of all managed devices, making it easy to identify which ones require updates. You can build groups based on inventory criteria and then trigger device management tasks automatically to specific individuals or groups, or make items available on demand to users with Self Service.

APP MANAGEMENT - Create personal, purpose-built devices, fast

License Management

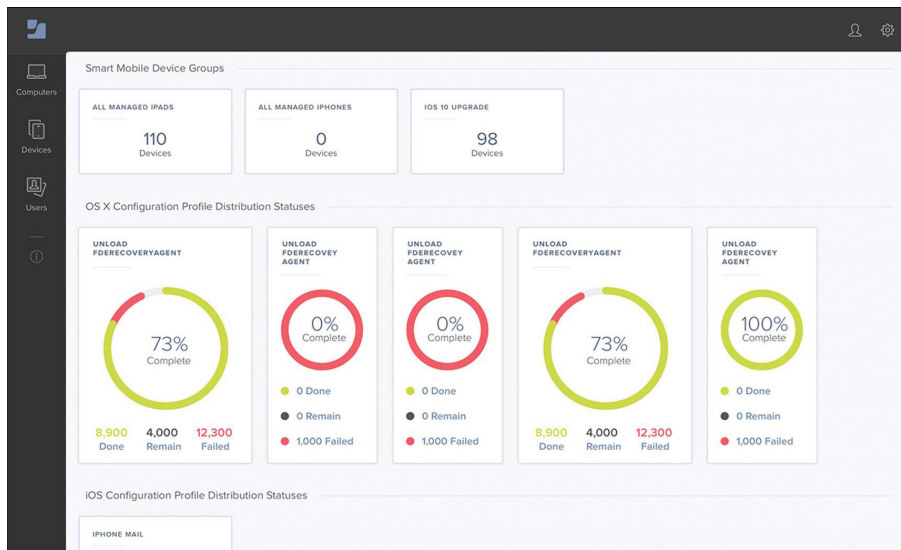

Integrated with Apple's Volume Purchase Program (VPP) and Apple School Manager, license and deploy apps in bulk right from the App Store. Assign apps to users or devices (no Apple ID required) and re-assign licenses as needs change. Or, deploy apps from the B2B App Store to meet your organisation's unique needs.

App Distribution

Distribute apps and content to Mac, iPad and iPhone from the App Store or third-party software vendors to an individual or group. This can be done silently, pushed on demand or published to your Jamf Pro enterprise app store.

App Configuration

Native app management supported; no custom SDK or containerisation required! Get right to preconfiguring settings and customizing app workflows to provide instant mobile productivity. For macOS, use Jamf Composer to build custom app and software packages.

App and OS Upgrades

Get alerts when new updates for the most commonly patched third-party macOS software titles are available. Deploy OS updates efficiently and monitor the upgrade process through inventory. Set iOS apps to update automatically to maintain the most secure environment. Rest assured that Jamf will support new Apple OS versions as soon as they're released.

INVENTORY - Collect inventory information automatically

Automatically collect user, hardware, software and security device data or customise inventory specifications with extension attributes, such as the output of a script or the status of a third-party app. Including:

Hardware

- Device type/model
- Serial number
- Processor, RAM, storage
- Battery health
- Warranty expiration

Software

- OS version
- Apps installed
- App versions
- Certificates and profiles

Security

- Encryption status
- System configurations
- Software restrictions
- Jailbreak detection

SECURITY - Reduce risk, get in front of threats

Encryption

Enforce native Apple encryption features built into macOS and iOS to protect data without system performance hits or third-party utilities. Jamf Pro makes it easy to enforce passcodes on iOS devices and run policies to turn on FileVault for macOS. It's Apple security made easy.

Commands

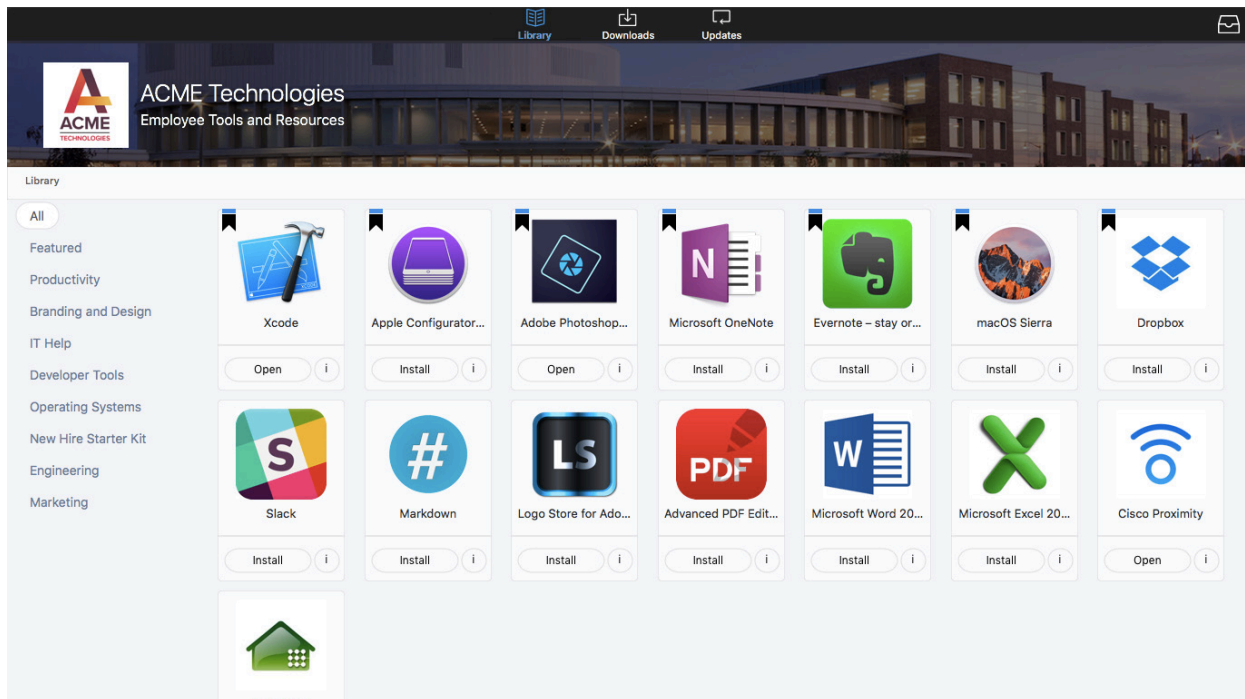

Send commands to Macs, iPads or iPhones to remotely manage individual or groups of devices. Run simple commands to clear a passcode or update to the latest OS. If a device goes missing, send a remote lock, wipe or enable Lost Mode to activate Location Services.

Settings Compliance

Create customised security settings for your organisation through configuration profiles and policies. Provide access to secure Wi-Fi networks without sharing the password. Pre-configure VPN settings or deploy certificates to easily allow your users to securely connect to the network. Enforce password complexity settings and require changes as often as you want.

SELF SERVICE - Help users, help themselves

More than an app catalog, Self Service transforms the IT and end-user experience. Through an intuitive interface, users can install apps, update configurations, and troubleshoot common issues, creating an environment of empowerment. You customise the Self Service catalog for what your users need.

- Access to the App Store, in-house apps and third-party apps
- Password resets and compliance information
- Email, VPN and other configurations
- Basic maintenance and system diagnostics
- E-books, guides and videos
- Software and OS upgrades
- Bookmarks and shortcuts
- Single Sign-on (SSO) integration
- Printer mapping and drivers
- Help desk ticketing and hardware requests
