

INSIGHT SECURITY SOLUTIONS

Assess. Mitigate. Prevent.

Assuming your data and information are safe can lead to a security breach. Covering the entire security continuum, our experienced security consultants will enable you to maximise protection and substantially mitigate the risk. We'll assess your entire infrastructure's vulnerabilities and design, implement and monitor a tailored multi-vendor, multi-layered security solution. Crucially, we'll ensure you have the detailed forensics and intelligent logging that will minimise the cost and reputational impact of any breach.

Insight Security Solutions

Business challenge

From the exploitation of software vulnerabilities to lost USB sticks to disgruntled employees, an organisation's business systems and data are under constant threat. A security breach can not only seriously damage an organisation's image, but also its bottom line through costly downtime, hefty fines and, perhaps more importantly, the loss of customer trust. If the breach results in stolen or compromised data that is personal or business-sensitive, the organisation may be permanently damaged. However, for many organisations, calculating and staying on top of the risks is both costly and difficult.

Our solution

With wide-ranging experience across multiple sectors and strong partnerships with major security vendors, our security consultants will assess in detail the risks faced by your organisation, quantify their cost impact and create a specifically designed end-to-end, multi-vendor solution for your organisation – including all the safeguards you need to minimise any impact if you do suffer a breach to ensure business continuity and swift recovery.

Benefiting from all the strength and expertise of a dedicated security operations centre without having to staff and maintain one in-house, you'll be able to align a fixed budget to your security cost, while having the peace of mind that you're protecting the integrity of your data assets – and therefore your organisation's reputation and revenue.

90% of large organisations and 74% of small businesses had a security breach in 2015* and the number continues to rise.
